- Full Grayscale Calibration

  Work with NovaStar's high-precision calibration system and the C3200 scientific grade camera to generate unique calibration coefficients for each grayscale, ensuring uniformity of each grayscale and dramatically improving the image quality.

- HDR
  - Support HDR10 and comply with the SMPTE ST 2084 and SMPTE ST 2086 standards.
  - Support HLG.
- Latency
  - Support low latency and the controller load capacity is not reduced. The latency at the controller is 0 frame (less than 1 ms) in Send-Only Controller working mode and 1 frame in All-In-One Controller working mode.
  - Support additional latency. Zero to two frames of latency can be added at the controller.
- Frame Rate Adaptive

  The controller can be adaptive to various video input frame rates, including decimal frame rates. Custom frame rates are also supported and the step size of fine tuning frame rate is as small as 0.01 Hz.

- Two working modes

  Support the All-In-One Controller and Send-Only Controller working modes.
  - In the Send-Only Controller mode, the latency can be reduced by one frame.
  - In the All-In-One Controller mode, the layer and scaling functions are available.
- Display system monitoring

  Support monitoring of the device status and screen status. Any fault and alarm information can be reported actively.

Device Controls

- Touch LCD

  Come with a 5.5-inch 1080p touch LCD. It is sensitive and rugged, allowing users to control the device easily by tapping on the LCD.

- VMP software control

  The device can be connected to the VMP software to provide easy and convenient operations and smart device management.

- Cascading control via Ethernet

  The Gigabit Ethernet control ports support TCP/IP protocol and star topology. No switch or router is needed to deploy multiple devices on the same LAN via device cascading as the network switching function is already built in.

Function Limitations

- The Frame Rate Adaptive function can be achieved when the CX40 Pro works with the CA50E receiving card. Currently supported driver ICs include MBI5264, ICND2055, ICND2065, ICND2059 and ICND2069. In addition, the .ncp file generated by the Cabinet Tool from NovaStar must be used.
- The Dynamic Booster function can be achieved when the CX40 Pro works with the CA50E receiving card. Before operation, brightness correction by using the CA410-VP427, CA410-P427 or EYE2-400 color analyzer is recommended.
- The Full Grayscale Calibration function can be achieved when the CX40 Pro works with the CA50E receiving card.
- Using the HDR function reduces the CX40 Pro load capacity by less than half if the CX40 Pro works with the CA50E receiving card. For details, see the Ethernet Port Load Capacity section.

Ethernet Port Load Capacity

When the CX40 Pro works with the CA50E receiving card, the formula of calculating the load capacity per Ethernet port and the detailed parameters are as follows.

- 8bit: Load capacity × 24 × Frame rate < 5G × 0.75
- 10bit: Load capacity × 30 × Frame rate < 5G × 0.75
- 12bit: Load capacity × 36 × Frame rate < 5G × 0.75

Max Load Capacity per Ethernet Port (Pixels)			
Frame Rate / Bit Depth	8bit	10bit	12bit
24 Hz	6,480,000	5,182,500	4,320,000

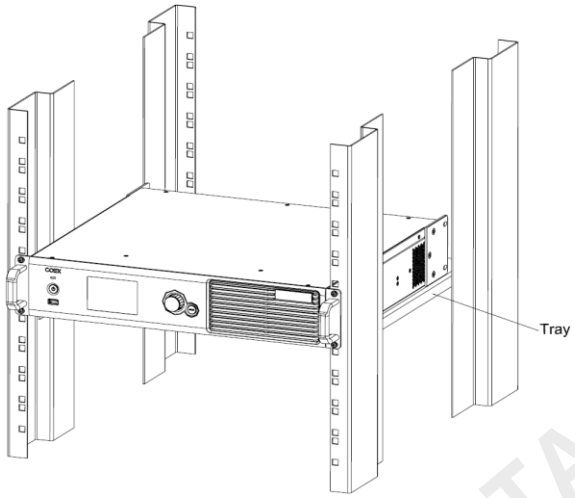
Notes and Cautions

Notes for Battery

- The battery is not intended to be replaced.
- Disposal of a battery into fire or a hot oven, or mechanically crushing or cutting of a battery can result in an explosion.
- Leaving a battery in an extremely high temperature surrounding environment can result in an explosion or the leakage of flammable liquid or gas.
- A battery subjected to extremely low air pressure may result in an explosion or the leakage of flammable liquid or gas.

Notes for Installation

When the product needs to be installed on the rack, 4 screws at least M5*12 should be used to fix it. The rack for installation shall bear at least 32.4kg weight.



- Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.
- Reduced Air Flow – Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.
- Mechanical Loading – Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.
- Circuit Overloading – Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.
- Reliable Earthing – Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).
